

C5G is a mobility software infrastructure that gives users the *power to evolve*. It comprises these products: [CloudMax](#), [ClientMax](#) and [Continuum](#).

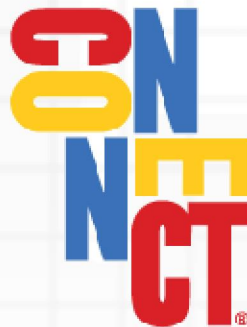

## The Power to Evolve

- *Versatile*: Removes cost barriers and facilitates the adoption of new technologies in mobile architectures and devices.
- *Agile*: C5G users can quickly change the structure of their mobile networks without additional hardware or software investments (e.g. from telnet to web or concurrent sessions, from on-premise servers to cloud, from direct-to-host to server mode).
- *Expansive*: The C5G investment appreciates over time and with the growth of mobile networks. This infrastructure increases in value as the scope of the user's business expands.
- *Maximum*: C5G delivers speed, usability, scalability and security, yielding the greatest ROI in the mobility space

C5G is versatile, agile and expansive by nature. This proposes a value far greater than any solution in the industry. And, as opposed to freeware which will always require recurring expenditures, C5G protects the user's past investments as their mobile architectures evolve.
