

Connect, Inc.

The Company

In 1991, Connect, Inc developed the enabling software technology that made large-scale wireless networking a reality. Today, Connect is enabling the future of mobile connectivity by providing stability and security to cloud-based architectures, and speed and scalability to web-based applications.

Connect's patented innovations make mobile device performance simpler, smarter and faster by:

- Achieving sub-second response times with telnet and web-based applications
- Facilitating increases in the number of mobile devices on the network without costly performance degradation
- Increasing productivity with diagnostic tools and support for troubleshooting network failures
- Improving user productivity by transparently restoring dropped and casually connected wireless sessions
- Securing data transmissions with SSH encryption

Products

C5G is a mobility software infrastructure that gives users the *power to evolve*. It comprises these products; **CloudMax**, **ClientMax** and **Continuum**.

C5G is versatile, agile and expansive by nature. This proposes a value far greater than any solution in the industry. And, as opposed to freeware which will always require recurring expenditures, C5G protects the user's past investments as their mobile architectures evolve.
