# Chapter 1 • Introduction

---

## Description

The Apex III and IV hand held terminals feature a full alphanumeric keypad, full graphic display (240 x 160 pixels) with user activated backlighting, a voice-capable standard PC 8 ohm speaker, 4 MB of Flash memory and 4 MB of on-board RAM. The Apex III and IV contain a 32 bit microcontroller @ 33 MHz and run Symbol Wireless Spectrum 24.

The Apex III and IV support Batch or Wireless operations via an internal type III PCMCIA port that can simultaneously support two type I or II devices. This port provides the user with connectivity and memory expansion options including network interface adapters, wired and wireless high speed modems, Flash drives and RAM disks.

The Apex III and IV have an optional integrated laser scanner. Features include long range, very high density, wide angle or advanced long range. A squeeze-lock connector offering tethered connectivity (2D Scanner, CCD, wand, etc.) provides an alternative to an integrated laser.

Data is transmitted to and from the Apex III and IV via the infrared interface or the optional end cap Serial RS 232 Interface port. The Apex III and IV utilize a DOS based operating system (ROM-DOS 6.22), supporting DOS applications, graphic displays and existing DOS user software. A Windows-based program generator is available to execute most data collection applications.

For more information about the Apex III and IV terminals, see [www.Compsee.com](http://www.Compsee.com).

## Pictures

**Apex III**

**Apex IV**

## Setup Requirements

Installation of PowerNet Twin Client requires, at a minimum, the following:

- A Pentium-class processor
- 32 MB of RAM
- 10 MB of free hard disk space available
- Microsoft® Windows 95, 98, ME, XP, or NT/2000 operating system

---

## Accessories

Accessories for the Apex III and IV terminals include:

### PC Card

- User-accessible PC Card Slot (One - Type III or two-2 Type I or II, user accessible)

### Power Options

- Rechargeable 1400 mAh, NiMH battery pack, standard
- Apex III Dock (one Fast Charge Time Charging Bay in Dock for Spare Battery Charging) for Apex III or IV
- Apex III External Battery Charger, Desk or Wall mountable s (2 Slots - Fast Charge Time 120 Minutes or less) for Apex III or IV
- Vehicle (12 VDC) Battery Charger (Fast Charge Time, 120 Minutes or less)

## Software BIOS

The version of the software BIOS will appear on the terminal screen when the terminal is rebooted. For rebooting instructions, see *Cold Booting the Terminal* in the *Quick Start* section of this manual.

## Release Note

Compsee DOS terminals have two modes of determining screen row and column sizes. You can use one or the other, but not both. The custom font file "H.fon" will take precedence.

The first method is the base mode, and can be set to one of the following:

1. 20 rows by 30 columns - Set TwinClient to Double High = No, Double Wide= No
2. 10 rows by 30 columns - Set TwinClient to Double High = Yes, Double Wide = No
3. 20 rows by 15 columns - Set TwinClient to Double High = No, Double Wide = Yes
4. 10 rows by 15 columns - Set TwinClient to Double High = Yes, Double Wide = Yes
5. Delete the C:\\*.fon file on the terminal.

The second method involves using a Compsee H.fon custom font file obtained from Compsee. Make sure you load that on the C: drive in the terminal.

This page is intentionally blank.

# Chapter 2 • Terminal Setup

## Downloading from the WEB

The PowerNet Twin Client software package can be downloaded from the Connect web site at <http://www.connectrf.com>. Click on *Partner Services* and then click on *Software Downloads*. Select the file named *PowerNet Twin Client for Compsee*.

## Running Setup from a Download File

The downloaded file is a compressed archive. After extraction using a utility such as *WinZip* or *PKWARE*, folders are created on the hard disk as shown in the following figure.

Name	Size	Type
disk1		File Folder
disk2		File Folder
disk3		File Folder
disk4		File Folder

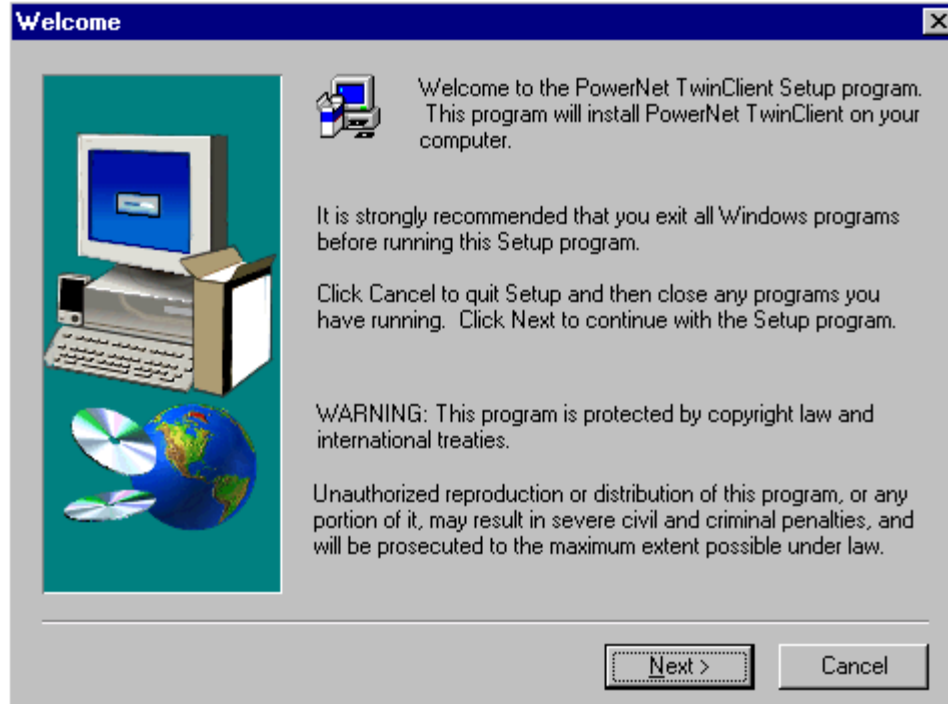

Click on the **Disk1** folder to view the files as shown in the following figure.

Name	Size	Type
_inst3...	292KB	EX_ File
_ISDel...	27KB	Application
_Setu...	34KB	Application Extension
_sys1...	172KB	WinZip File
_sys1...	4KB	HDR File
_user1...	1KB	WinZip File
_user1...	5KB	HDR File
Data.tag	1KB	TAG File
data1...	3,501KB	WinZip File
data1...	13KB	HDR File
lang.dat	5KB	DAT File
layout...	1KB	BIN File
os.dat	1KB	DAT File
setup....	185KB	Bitmap Image
Setup....	70KB	Application
Setup.ini	1KB	Configuration Settings
setup.ins	58KB	Internet Communication S...
setup.lid	1KB	LID File

Click on the **Setup** application and proceed to the following section entitled *Installation* for further instructions.

## Installation

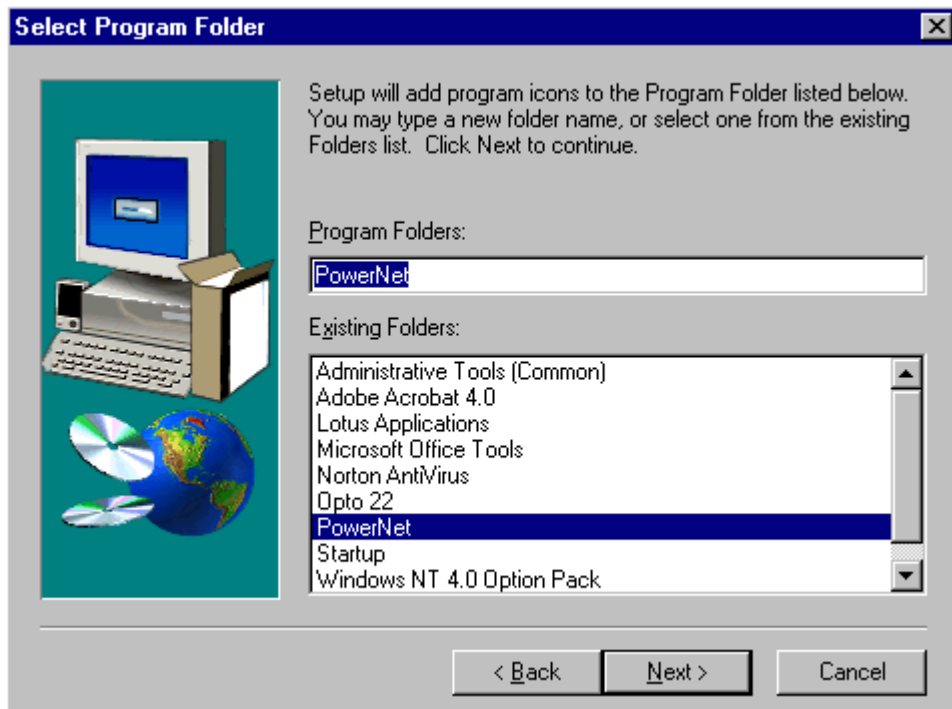

The InstallShield wizard runs and presents the following screen.

Click on **Next** to begin the installation process.

To change the default Destination Location, click on **Browse** and select a location. Then click on **Next**.

The default folder is **PowerNet**. This default may be changed either by selecting an existing program group or by typing in a new name at the prompt. Then click on **Next**.

When the installation is complete, reboot the system to initialize the Twin Client software.

- a. To reboot the system immediately, click on **Finish**.
- b. To reboot later, click on the option to restart the computer later, and then click on **Finish**.

## Running the Manager

The PowerNet Twin Client Manager is the utility that manages the terminal software and configurations.

Select **Start, Programs, PowerNet, and Twin Client Manager**. The PowerNet Twin Client Manager screen appears as shown in the following figure. This is the administrator's main screen, and all functions are accessed from its menu bar, toolbar, and tabs.

### Menu Bar

The menu bar provides access to the functions used to configure the terminals and manage their software.

## Toolbar

Found under the menu bar, the toolbar provides shortcuts to major features. The toolbar can be turned on or off by changing the Toolbar parameter found on the **View** menu. The shortcuts available from the toolbar are as follows.

Create a new terminal configuration.

Open an existing terminal configuration.

Save the current terminal configuration.

Download the configuration to the terminal.

Download software to the terminal.

Configure terminals automatically over the wireless network.

View the PowerNet Twin Client Manager version.

The PowerNet Twin Client Manager is now successfully installed and ready for use. *Quick Start* provides detailed instructions for quickly configuring the terminal and starting a Telnet session.

## Quick Start

*Quick Start* describes how to prepare the Twin Client Manager and the Compsee terminal for a Telnet session with the host. Following an initial setup procedure, the terminal software and configuration are managed automatically, over the wireless network.

### Configuring the Manager

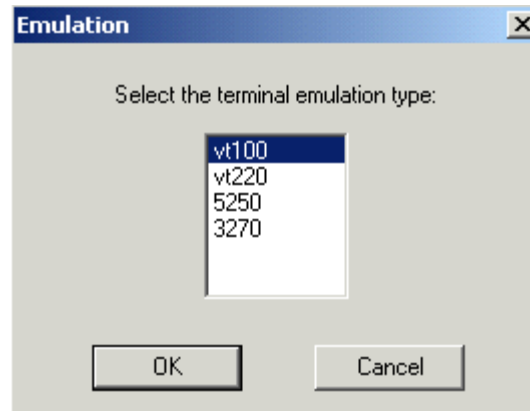

The first step is to configure the Twin Client Manager to meet site-specific requirements, and then prepare it for the automatic management of the terminal software and IP addresses. This simple procedure will require only a few minutes to complete.

### Setting the Emulation

Click on **Start, Programs, PowerNet, and Twin Client Manager**. Select the **Settings** menu, as shown below.

Click on **Emulation**, select the desired emulation, and click on **OK**.

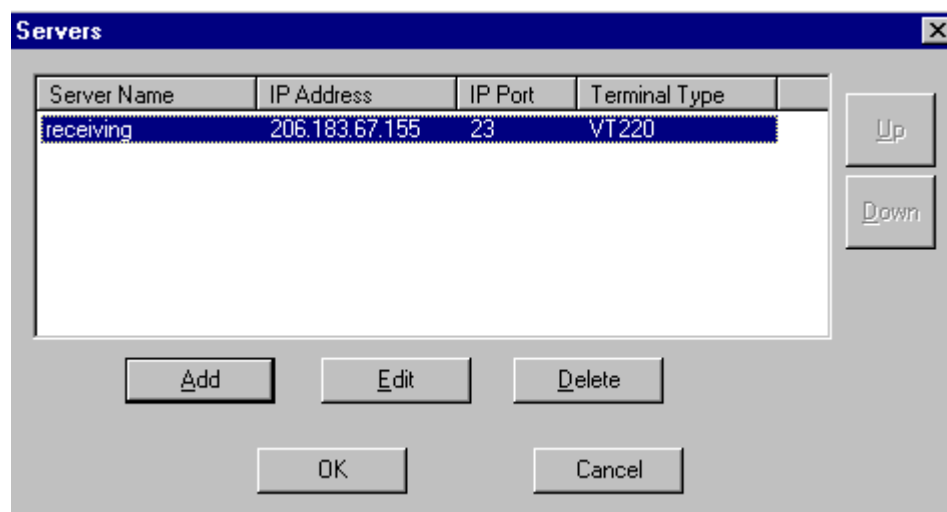

## Setting the Servers

The Servers are the Telnet host systems the terminals will access.

To set these addresses from the **Settings** menu, click on **Servers** and then click on **Add**. Enter the name of each server, its IP address and IP port (normally 23 for Telnet servers), and emulation type. Then click on **OK**.

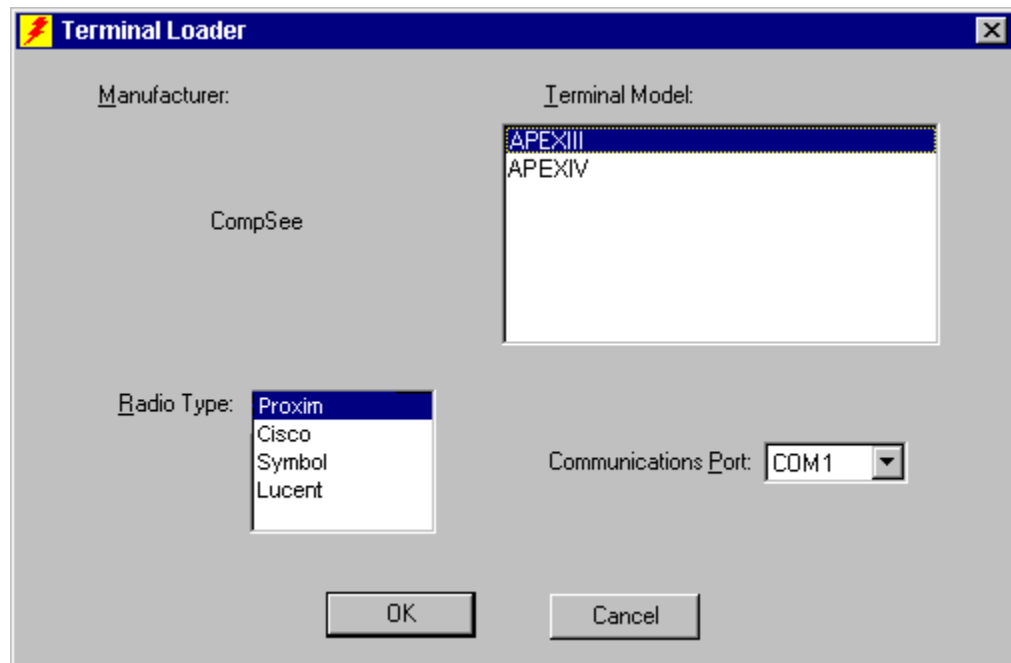

Repeat this step for each Telnet server the terminals are required to access. If an error is made in the name, IP Address, IP Port number, or Terminal emulation type, click on the line that is in error and then click on the **Edit** button to make the corrections.

## Setting Terminal Model

Under **Settings**, choose the **Options** menu as shown.

Select terminal model, desired radio type, and COM port.

## Saving the Configuration

Click on **File** and **Save As**. Enter a name for this configuration.

For the purposes of this example, the name is vt100.

## Setting Auto-Configuration

The configuration download and IP address assignment for each terminal will take place automatically by setting the Auto-Configuration options.

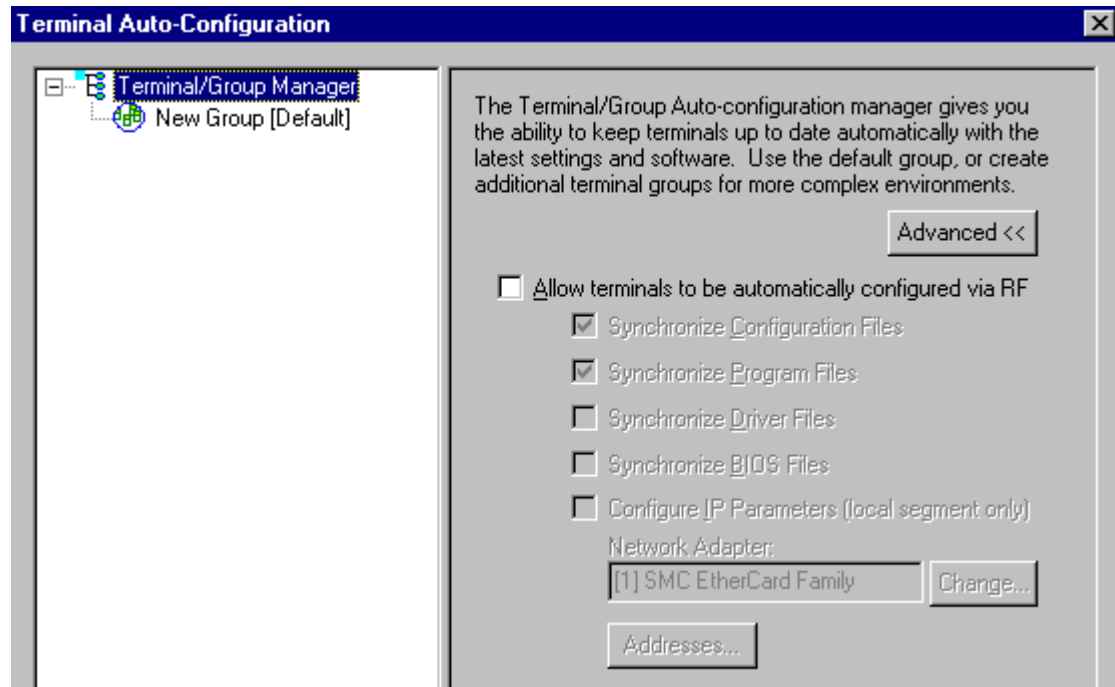

Click on the **Auto-Configuration** option in the **Settings** menu.

**Note:** If the Auto-Configuration window does not display the options, click on the **Advanced<<** button.

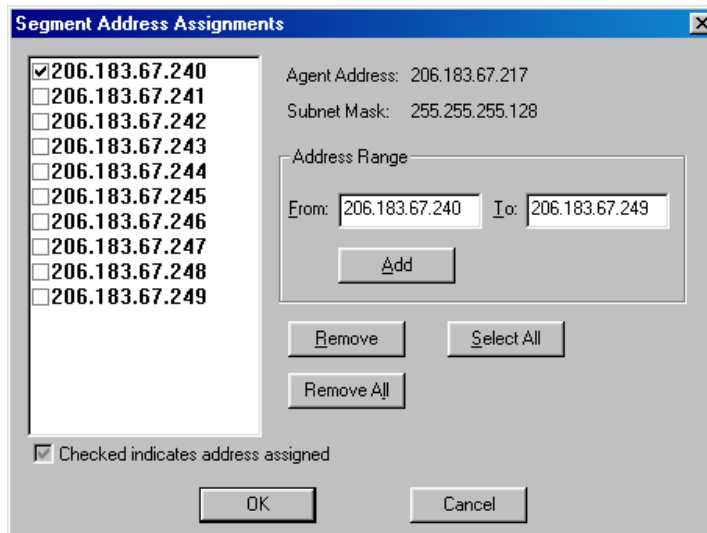

If multiple network adapters are installed on the PC, ensure that the desired network adapter is selected. The adapter selection can be changed by clicking on the **Change** button.

This powerful software management tool is described in detail in *Auto-Configuration*. For now, it is sufficient simply to use it for assignment of the initial terminal configuration and IP address, both of which can be easily changed later. Ensure that all of the check boxes are checked as shown above.

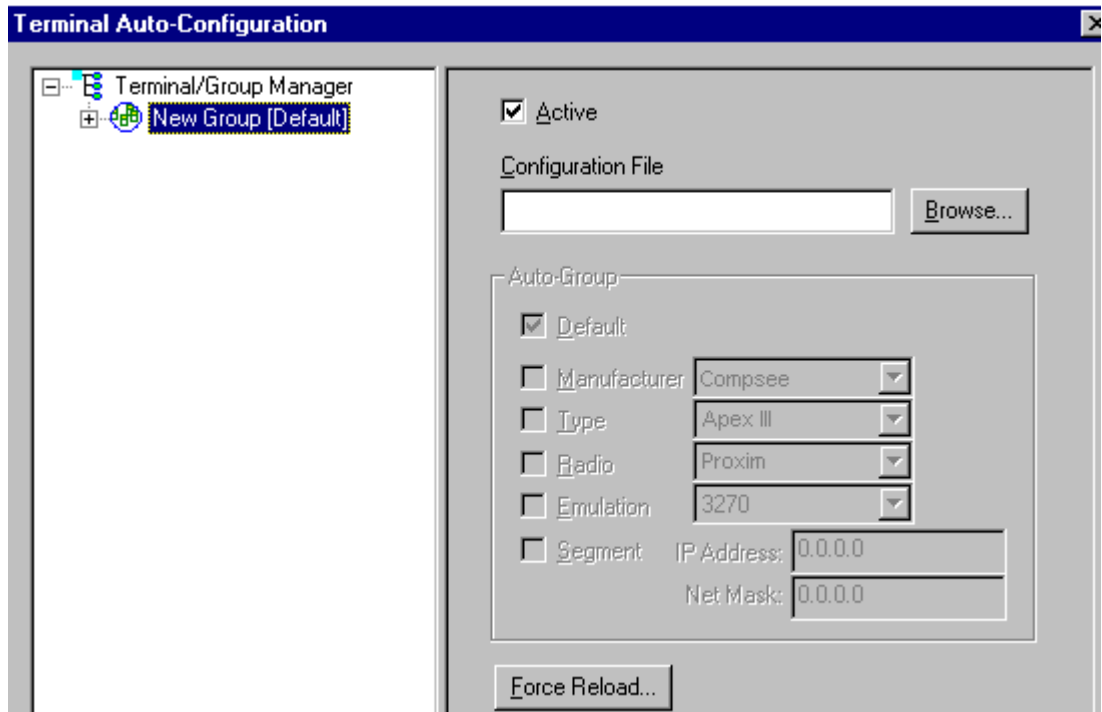

To assign terminal IP addresses automatically over the wireless network, check all of the boxes as shown above. Then click on the **Addresses** button and enter the desired range in the **From** and **To** boxes as shown in the following figure.

After setting the address range, click on **OK** to return to the Auto-Configuration screen and then click on the box next to **Terminal/Group Manager**.

Click on the **+** sign in front of **Terminal/Group Manager** to access the default terminal group. Next, click on the **New Group** icon and use the **Browse** button to select the configuration file saved earlier.

Check the **Active** box, and the system is now configured to automatically download IP addresses, software, and configuration files to the terminals. Click on the **✕** box in the upper right corner to return to the main menu.

**Note:** The software does not need to be authorized now. It can be authorized later, after a Telnet session has been established. The procedure is described in *Authorizing PowerNet* under *Standard Setup*.

## Downloading Program Files

Under the **T**erminal menu, click on the **S**end **P**rogram Files to Terminal menu option.

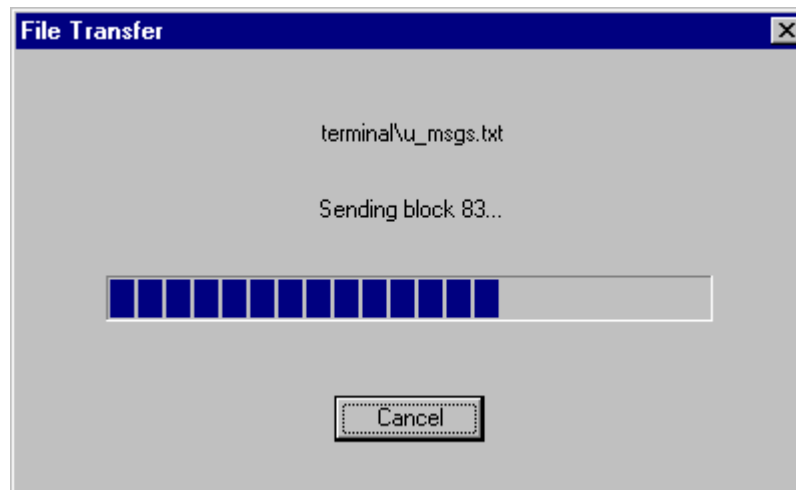

At the prompt, choose **Y**es or **N**o to download files. Choosing **Y**es is needed to run in Telnet mode.

The following screen will appear.

The program and configuration files will be transferred from the PC to the terminal.

After the file transfer is complete, cold boot the terminal, by pressing the POWER and SCAN keys.

## AirLoad Execution

Once the terminal reboots, Airloader will automatically search for the Airloader server. If no server is found, the following message will appear on the terminal.

No Airload Manager was found on this segment.  
Do you want to enter the IP address of the Airload  
Manager? **Yes/No**

Select **Yes** to download Airloader. Enter the Airloader Manager IP address.

Select **No** if the Airloader Manager IP address is unknown or if and the Airloader manager is not preferred.

If **Yes** is selected, enter the IP address. If no is selected, proceed to *Manual Configuration Update*.

Airload Manager IP Address

2 0 7 . 2 4 1 . 7 8 . 1

Press **Enter** to save.

Cold Boot the terminal and proceed to *Starting a Telnet Session*.

## Manual Configuration Update

The configuration files can be downloaded manually if:

- The configuration files have been modified, since the initial download.
- The configurations had not been downloaded previously.

## Connecting the Cradle

The terminal download requires a serial connection between the terminal and the PC through a cradle. In preparation for this download perform the following:

- Connect the selected serial port on the PC to the cradle with the manufacturers cable.
- Verify that the cradle is powered on.

## Preparing the Terminal to Receive Files

On the portable terminal, power the terminal Off, then boot the terminal pressing the **Power** and **Scan** key.

The terminal boots to the DOS prompt. To activate the IRDA port for the serial file transfer, from the terminal, type IR ON and press **Enter**.

```
C:\>IRON
```

From the terminal type LD, and press **Enter**.

```
C:\>LD
```

## Downloading Configuration Files

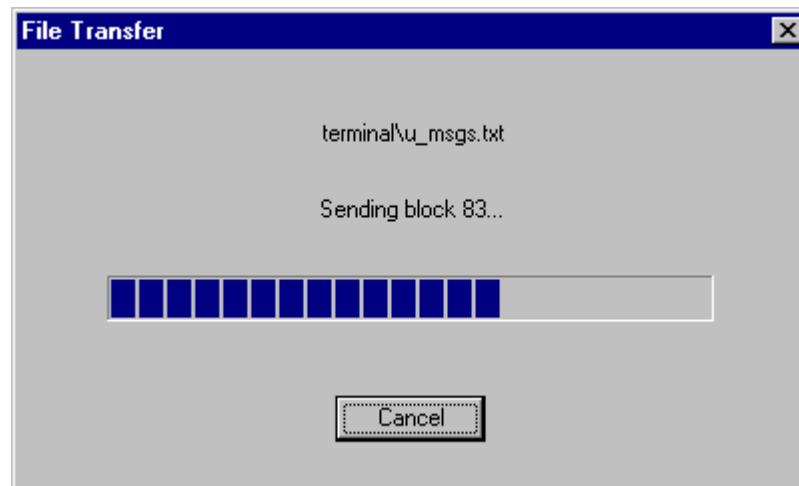

From the Twin Client Manager select **T**erminal and **S**end Configuration Files to **T**erminal to execute the configuration file update.

Choose **OK**.

The program and configuration files will be transferred from the PC to the terminal.

After the file transfer is complete, cold boot the terminal, by pressing the **Power** and **Scan** keys.

After the terminal reboots, a successful wireless connection and download is indicated by the display of the PowerNet main menu shown in the following graphic.

```
PowerNet
© 1991-2006, Connect, Inc.

Keypress to Continue
```

**Note:** The date of 2006 is updated on the terminal at the time of a new release.

The terminal is now ready to establish a Telnet session with the host system.

## Starting a Telnet Session

At the PowerNet main menu on the terminal, press any key to establish the connection. Until the terminal has been authorized, the following screen is displayed.

```
RECOVERABLE ERROR
Terminal not
Authorized for
PowerNet

Keypress to Continue
```

It is not necessary to authorize the terminal at this time, so press any key to continue. The terminal will establish a connection with the host system and start emulation. If the terminal fails to connect to the host, refer to the following table for the possible causes and the related corrective actions.

Failure Cause	Corrective Action
Incorrect Host IP address	Correct the Host List address on the terminal. Refer to the sub-section <i>Terminal Setup Using PowerNet Menus</i> for instructions.
Incorrect netmask value	Access Radio Setup menu and correct the netmask value. Refer to the sub-section <i>Terminal Setup Using PowerNet Menus</i> for instructions.

After a Telnet session has been successfully established, the terminal will remain in session for a maximum of 30 minutes at a time until it has been authorized. Once authorized, there is no software restriction on the session time. The instructions for authorizing the terminal are presented in the *Authorizing PowerNet* section.

## Troubleshooting

The following table describes the error messages that will be displayed on the terminal in the event of a download failure, and can be used as a guide to correcting the problem.

Error Indication	Possible Cause	Corrective Action
No AirLoad Manager Found	AirLoad Manager not active, or not installed on the LAN segment	Ensure that the PC with Twin Client Manager is on the same segment and that the PC is operating. If the PC is not on the same segment, enter the address of the PC in response to the terminal prompt.
Unable to open connection	IP stack on terminal failed to load	Reload Program Files and reboot.
Timeout waiting for data	Transient communications failure	Reboot terminal. If problem persists, check the RFSYNC.log in the PowerNetTN directory.
Download aborted	Socket closed during download	Ensure that PC is operating. Reboot terminal and retry.
Manager inactive	PC not operating	Restart the Airload PC server.

After taking the corrective action, the terminal must be cold booted by pressing the **Power** and **Scan** keys.

## Standard Setup

The default terminal setup is sufficient for most installations. However, to meet site-specific requirements, it may be necessary to customize terminal operation. The standard setup options simplify this process and can be modified by the following methods:

- Using the Twin Client Manager.
- Using the Twin Client terminal menu system.

*Standard Setup* describes how to use the Twin Client Manager and the terminal menu systems to set up the terminal. Also described are the methods for authorizing the terminal software.

### Setup Using Twin Client Manager

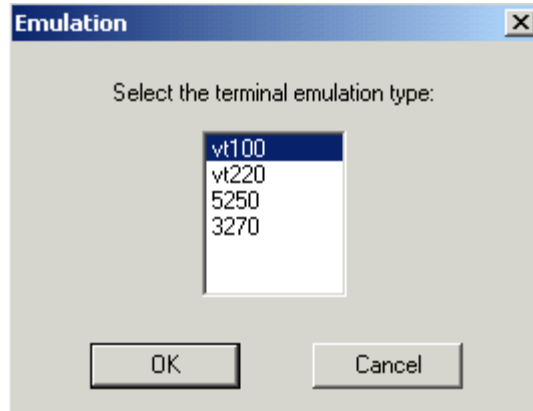

The Twin Client Manager provides a **Standard Settings** tab for automatic setup of the terminals. The options within this tab vary according to the emulation selected, each of which is described below.

#### VT Settings

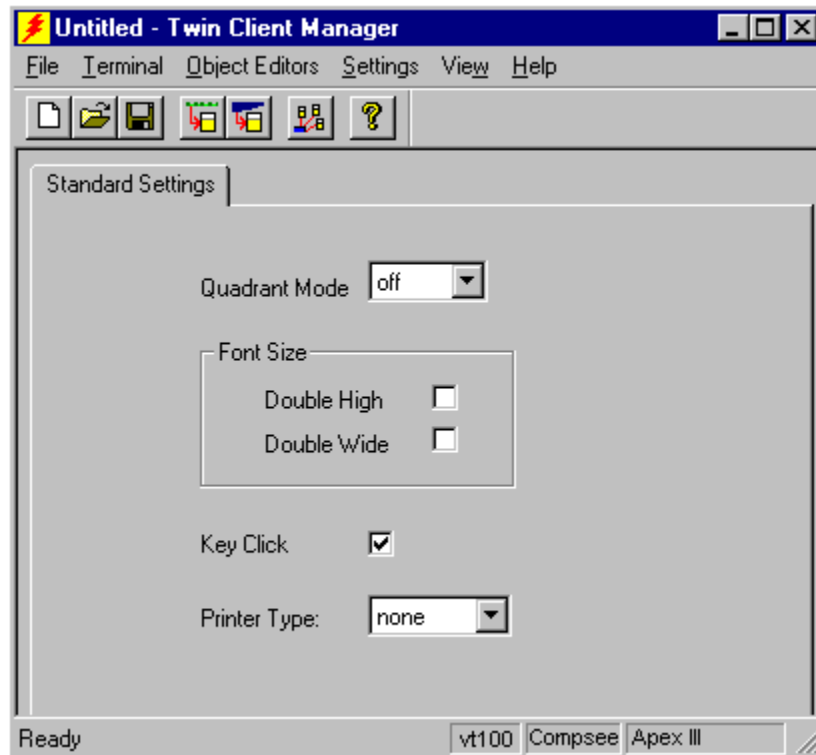

Select the VT emulation setup by clicking on the **Settings** menu and then the **Emulation** menu, as shown below.

Then click on the **vt100** or **vt220** selection, as shown below.

Click on **OK** after the selection is made, and return to the main Twin Client Manager menu. The standard settings tab will now reflect the settings for VT emulation.

## Quadrant Mode

The scrolling list option defines the rules by which the terminal display is positioned in the larger host display. As defined by Twin Client, quadrants are fixed position “windows” in the host display, and the terminal display is located on whatever quadrant contains the current cursor position.

**Off** disables quadrant processing and Twin Client simply centers the current host input field in the terminal display.

**On** enables quadrant processing. However, input fields that cross quadrant boundaries result in a shift to the left in order to locate as much of the current input field on the terminal display.

**Soft** always positions on a quadrant boundary regardless of input field boundaries. Viewing keys are enabled.

**Hard** is the same as **Soft** except the viewing keys are disabled.

**Lock** locks the terminal display origin (upper left corner) to fixed row and column (x,y) coordinates in the host display. The coordinates are zero-based.

## Font Size

These check boxes enable (checked) or disable (unchecked) the display of characters in double high and double wide font.

## Key Click

This check box enables (checked) or disables (unchecked) audible key clicks from the terminal. The default value is **on** (checked).

## Printer Type

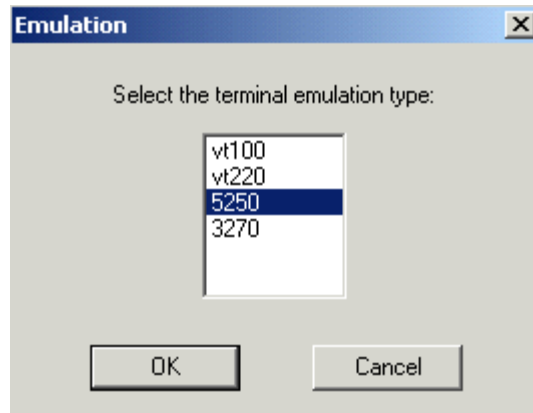

This scrolling list selects the attached printer type. The default value is **none**, indicating that no printer is attached.

## 5250 Settings

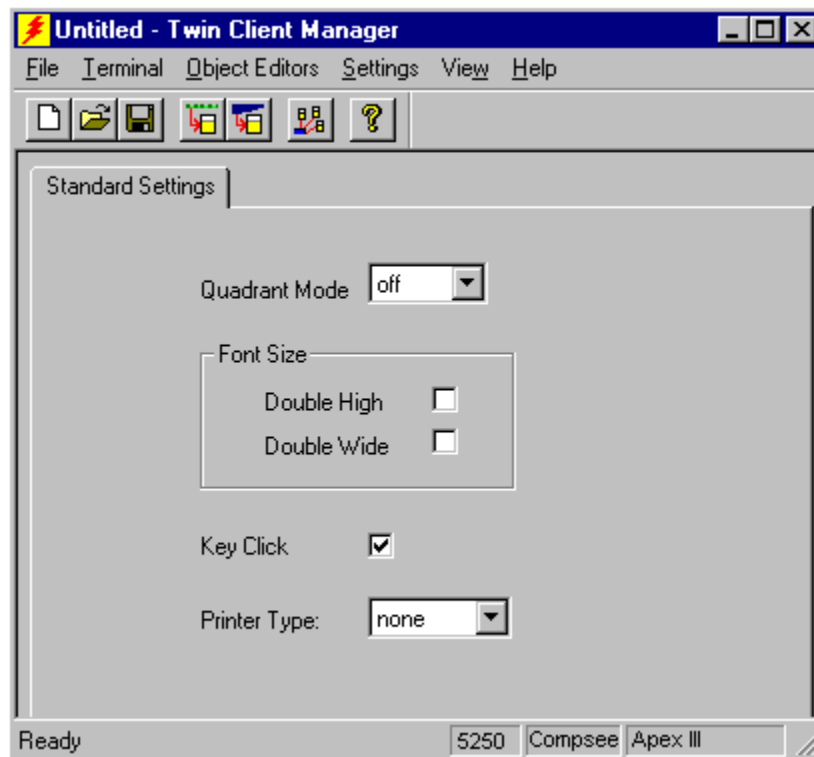

Select the 5250 emulation setup by clicking on the **S**ettings menu and then the **E**mulation menu, as shown below.

Then click on the **5250** selection, as shown below.

Click on **OK** after the selection is made, and return to the main Twin Client Manager menu. The standard settings tab will now reflect the settings for 5250 emulation.

### Quadrant Mode

The scrolling list option defines the rules by which the terminal display is positioned in the larger host display. As defined by Twin Client, quadrants are fixed position “windows” in the host display, and the terminal display is located on whatever quadrant contains the current cursor position.

**Off** disables quadrant processing and Twin Client simply centers the current host input field in the terminal display.

**On** enables quadrant processing. However, input fields that cross quadrant boundaries result in a shift to the left in order to locate as much of the current input field on the terminal display.

**Soft** always positions on a quadrant boundary regardless of input field boundaries. Viewing keys are enabled.

**Hard** is the same as **Soft** except the viewing keys are disabled.

**Lock** locks the terminal display origin (upper left corner) to fixed row and column (x,y) coordinates in the host display. The coordinates are zero-based.

### Font Size

These check boxes enable (checked) or disable (unchecked) the display of characters in double high and double wide font.

### Key Click

This check box enables (checked) or disables (unchecked) audible key clicks from the terminal. The default value is **on** (checked).

### Printer Type

This scrolling list selects the attached printer type. The default value is **none**, indicating that no printer is attached.

## 3270 Settings

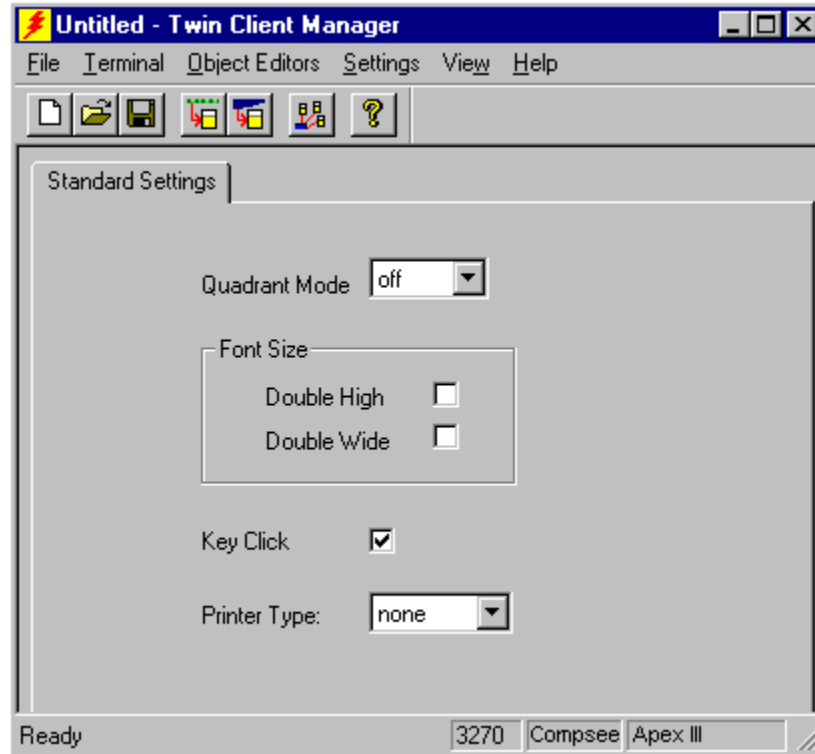

Select the 3270 emulation setup by clicking on the **S**ettings menu and then the **E**mulation menu, as shown below.

Then click on the **3270** selection, as shown below.

Click on **OK** after the selection is made, and return to the main Twin Client Manager menu. The standard settings tab will now reflect the settings for 3270 emulation.

### Quadrant Mode

The scrolling list option defines the rules by which the terminal display is positioned in the larger host display. As defined by Twin Client, quadrants are fixed position “windows” in the host display, and the terminal display is located on whatever quadrant contains the current cursor position.

**Off** disables quadrant processing and Twin Client simply centers the current host input field in the terminal display.

**On** enables quadrant processing. However, input fields that cross quadrant boundaries result in a shift to the left in order to locate as much of the current input field on the terminal display.

**Soft** always positions on a quadrant boundary regardless of input field boundaries. Viewing keys are enabled.

**Hard** is the same as **Soft** except the viewing keys are disabled.

**Lock** locks the terminal display origin (upper left corner) to fixed row and column (x,y) coordinates in the host display. The coordinates are zero-based.

### Font Size

These check boxes enable (checked) or disable (unchecked) the display of characters in double high and double wide font.

**Key Click**

This check box enables (checked) or disables (unchecked) audible key clicks from the terminal. The default value is **on** (checked).

**Printer Type**

This scrolling list selects the attached printer type. The default value is **none**, indicating that no printer is attached.

**Terminal Setup Using Twin Client Menus**

For compatibility with other PowerNet products, the PowerNet Twin Client for Compsee also supports the standard Twin Client configuration menu system on the terminal. This menu system is accessed by pressing uppercase **C** at the Twin Client main menu below.

```
Twin Client
© 1991-2006, Connect, Inc.

Keypress to Continue
```

The following menu appears.

```
Edit Menu Options
Edit Mobile Unit IP
Edit Server/Host IPs
Edit Radio Option
Edit License Key
Switch Client Modes
Run Client Emulator
Exit to OS
```

Use the **Up-Arrow** and **Down-Arrow** keys to navigate the menu, and press **Enter** to select the highlighted option. Each menu option is described below.

**Edit Mobile Unit IP**

The IP list contains the terminal IP address, the Subnet Mask and the Router IP address. Enter the appropriate address. Select **F3** to save and/or **F7** to Quit, as shown below.

```
IP 206.232.71.38
SN 255.255.255.0
RT 206.232.71.1

<F3> Save <F7> Quit
```

**Edit Server/Host IPs**

If the host IP address(es) were not pre-configured as described in the *Setting the Servers* section of *Configuring the Manager*, or if you wish to change those settings using the terminal menus, select this option and enter up to four Host IP addresses as required.

```
Host 0
IP 206.183.67.155
Port 23__
<F3> Save <F7> Quit
```

Press **F3** to save the configurations.

### Edit Radio Option

This function acts as a password to join the radio network. Terminals associating with an Access Point must supply a matching value, determined by their configurations, or their association requests will be ignored.

```
ID tsunami_____
<F3> Save <F7> Quit
```

### Edit License Key

The client software can be authorized automatically, as described in the next section, *Authorizing PowerNet*. This menu option permits authorization of each terminal manually. Select this option to obtain the terminal's Identification Code, which is used to obtain the Authorization code from the Connect web site, as described in the next section.

The 12-digit value displayed at the top of the terminal screen is the Identification Code for the terminal.

```
00A0F826E614
Authorization
_____
not authorized
<F3> Save <F7> Quit
```

Type the Authorization code into the field as it appears on the web site. Uppercase letters are significant, and punctuation characters, such as the hyphen (-), are required. Press **F3** to save the Authorization code.

### Switch Client Modes

The PowerNet Twin Client normally operates in Telnet mode, which provides direct connection to Telnet hosts. It can also operate in Server mode, through a PowerNet OpenAir server. Select this menu option to switch between Server and Telnet modes of operation. Note that the host socket address for the PowerNet OpenAir servers is 1800, which must also be changed in the **Edit Server/Host IPs** menu described above.

### Run Client Emulator

After all desired changes have been made, select this option to return to the Twin Client main menu. Then press any key to establish the Telnet session and begin emulation. Refer to *Starting a Telnet Session* under *Quick Start* for further instructions.

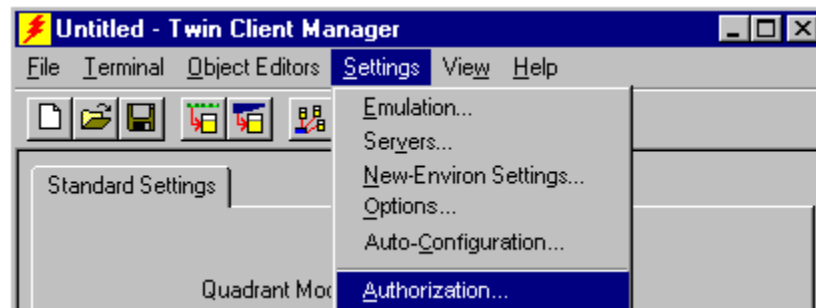

## Authorizing PowerNet

Each PowerNet Twin Client will run for 30 minutes at a time without authorization. Uninterrupted operation for a production environment is the result of authorizing the software.

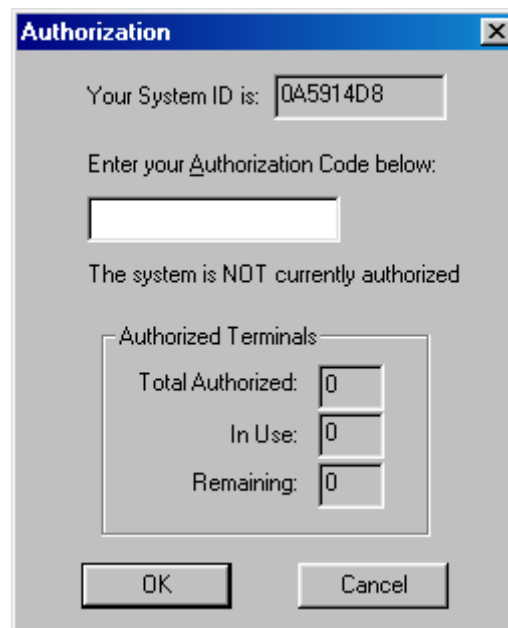

The Twin Client Manager can automatically authorize the terminal over the wireless network if the following requirements are met:

- A PC running Twin Client Manager is connected to the wire LAN segment with at least one access point within range of the terminal.
- The System ID of the PC on which Twin Client Manager is installed has been used to obtain a site license Authorization code from the Connect web site.

To obtain Twin Client Manager's System ID, click on **Authorization** under **Settings**.

The Authorization window is displayed as shown below.

The **System ID** is the value that is entered as the **Identification Code** on the Connect WEB site authorization page.

**Note:** In the case of **individual licensing for single terminals**, all punctuation characters and spaces will be filtered out of the System ID before the code is generated. In the case of **site licensing for multiple terminals**, punctuation characters and spaces are **not** filtered out of the System ID before the code is generated.

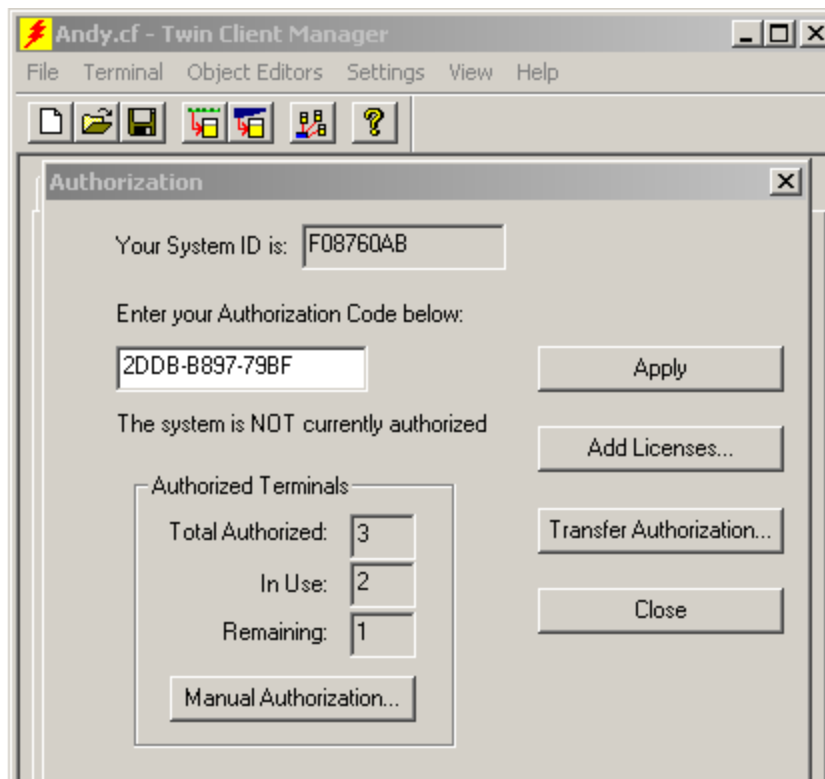

## Manual Authorization

The procedure for manually setting the Authorization code on the terminal is described in the section entitled *Edit License Key* in the *Terminal Setup Using Twin Client Menus* section above.

## Adding Licenses

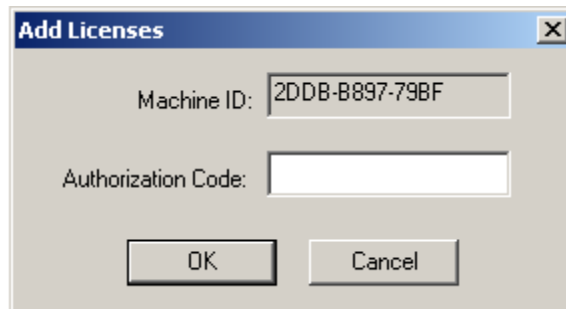

The Add Licenses feature is used when adding additional licenses to an already site licensed Twin Client Manager. (i.e. Twin Client Manager is licensed for 10, and the customer purchases another 10 licenses to make a total of 20.)

From Twin Client Manager, choose **Authorization** from under the **Settings** menu. Click on the **Add Licenses** button.

A pop-up box appears with the Machine ID and a space for the additional license's Authorization code.

Use the Machine ID in the pop-up box instead of the original Machine ID to get your Authorization code.

If adding users, click on the **Add Licenses** button before generating the Authorization code to get the most current Machine ID.

## Transferring Licenses

The Transfer Licenses feature is used when moving a site license from one PC to another. After Twin Client Manager is installed on a new PC, you will need the System/Machine ID for it. From Twin Client Manager, select **Authorization** from under the **Settings** menu. Click on the **Transfer Authorization** button on the old PC. You will be asked for the new System ID. Enter this new System ID. It will generate an Authorization code for the new PC's Twin Client Manager.

**Note:** This feature only works if there are licenses remaining on the old PC.

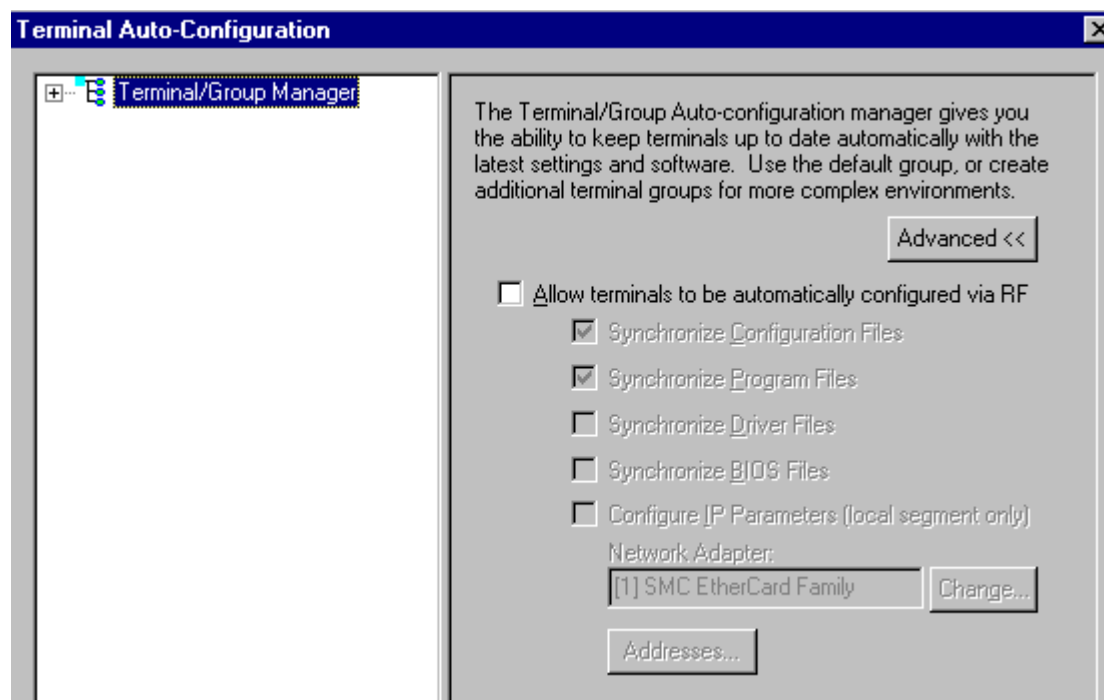

## Software Management

In addition to providing functions for the download of files to the terminal, the Twin Client Manager also provides for the management of terminal software and configurations automatically over the wireless network.

*Software Management* describes the automated capability in detail. Additional manual operations involving serial download options are described at the end of it.

### Auto-Configuration

The Auto-Configuration form is accessed from the Twin Client Manager **Settings** menu.

**Note:** If no options are displayed, click the **Advanced<<** button.

### Enabling Automatic Downloads

Click to put a check in the box that allows terminals to be automatically configured via RF to enable automatic downloading. In the event that another PC on the network is already configured and active, the following warning message is displayed.

## Synchronizing Configuration Files

Click to put a check in the Synchronize Configuration Files box to enable automatic synchronization of configuration files on the terminal. When the terminal is booted, its configuration files will be compared with the most recent on the PC. The terminal is updated automatically if it does not have the latest revision.

## Synchronizing Program Files

Click to put a check in the Synchronize Program Files box to enable automatic synchronization of program files on the terminal. When the terminal is booted, its program files will be compared with the most recent on the PC. The terminal is updated automatically if it does not have the latest revision.

## Automatic IP Address Assignment

New terminals will be assigned IP addresses automatically if the following box is checked.

**Note:** Do not check this option if a DHCP server is configured to manage address assignments.

To set the addresses, click on the **Addresses** button to access the Segment Address Assignments dialog box, as shown in the following figure.

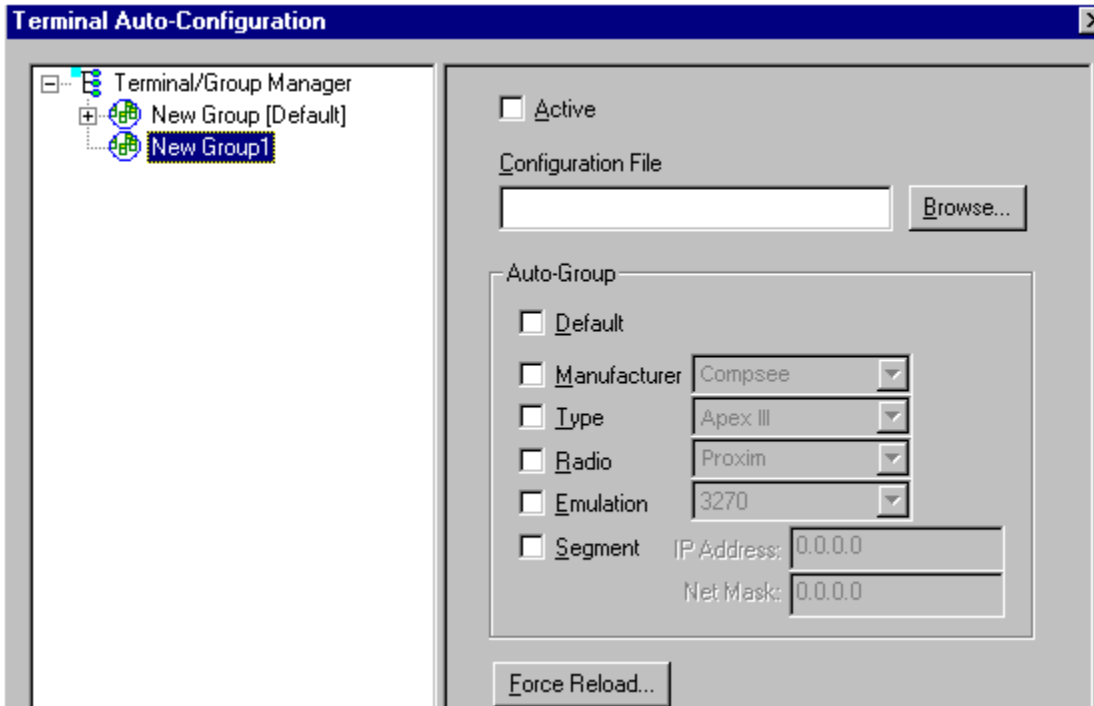

Enter the desired range in the **From** and **To** boxes as shown above, and then click on **Add**.

## Creating New Groups

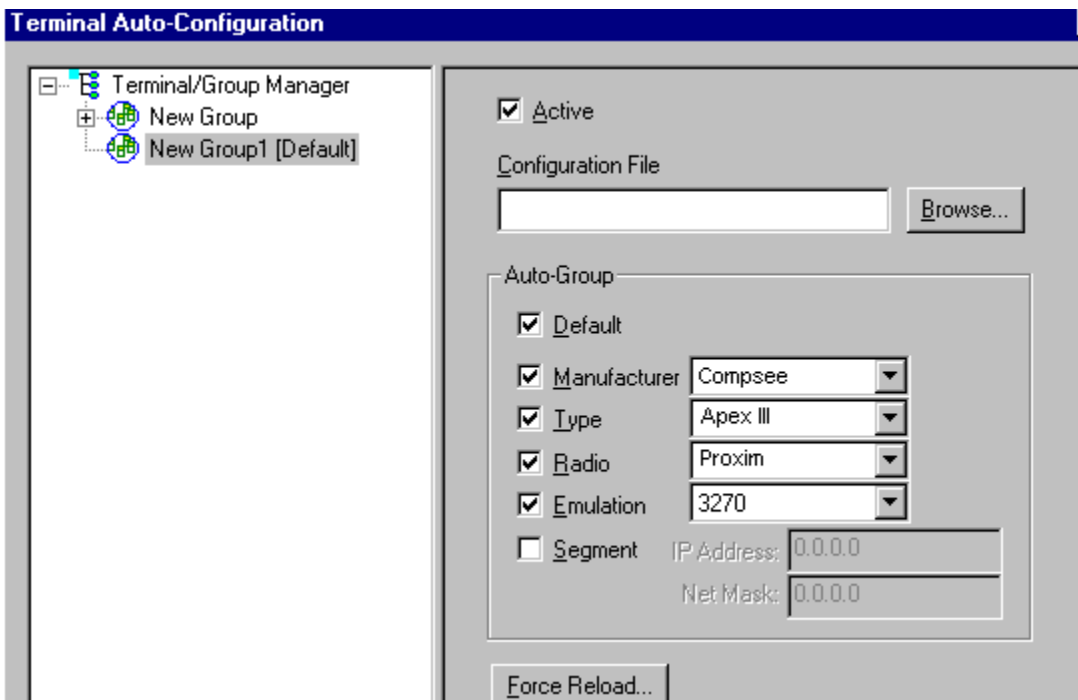

New groups, with different configurations, can be created by clicking on **Terminal/Group Manager** and then by clicking the right mouse button as shown.

After the new group has been created, the group settings option becomes available for change, as shown below.

After the Configuration File and all of the other parameters have been set, the group is made active by clicking on the **A**ctive check box.

## Setting the Segment

Checking the **Segment** button restricts a terminal group to a range of IP addresses. The IP Address can be any valid address on the segment, as it is used only to identify the segment. The setting of the Net Mask can be used to restrict the range. This feature is useful for segregating terminal groups by location.

## Setting Force Reload

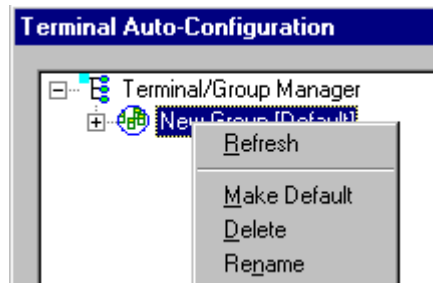

Clicking on the **Force Reload** button forces all terminals within a group to be automatically updated. The following warning message appears.

Click on the **Yes** button to force the reload.

## Setting the Default Terminal Group

New terminals that have not yet been assigned to any group are initially assigned to the default group in effect when they are booted.

Any group can be made the default group by clicking on the group, and then clicking on the right mouse button. Then click on the **Make Default** option.

## Reassigning Terminals

After a terminal has been configured and assigned to the default group, it can be reassigned to a new group by clicking on the terminal icon as shown below.

Then, holding the mouse button down, drag the terminal icon to the desired group as shown next.

Release the mouse button, which reassigns the terminal.

The next time the terminal is rebooted, it will be reconfigured as defined in the group specification.

## Manual Download of Configuration Files

The automated configuration management provided by the Twin Client Manager eliminates the need for manual terminal configuration. However, this function can be accomplished manually by clicking on **Terminal** and **Send Configuration Files to Terminal**. On the terminal, type “LD” at the DOS prompt, but do not Enter at this time.

**Note:** This procedure assumes that the PowerNet Twin Client was previously installed.

The following screen appears.

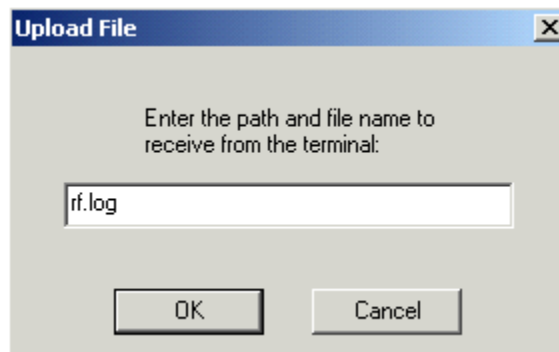

Choose **Enter** on the terminal while choosing **OK** at the prompt above. Boot the terminal. The terminal is now ready to begin a Telnet session with the new configuration files.

Under **Terminal**, you may select **Receive File from Terminal**.

Enter the path and file name to receive from the terminal in the Upload File dialog box.

The default file is “rf.log”. Click on **OK**.

# Chapter 4 • Error Message Resolution Guide

---

## Twin Client Error Message Resolution Guide

Message	Reason	Solution	Reference Tech Note
ENTRY TOO LONG;	Trying to key beyond the field size.	Ensure that you are entering input into the correct field.	---
ALPHABETIC ONLY;	Trying to key a character that is not alphabetic.	Ensure that you are entering input into the correct field.	---
MINUS NOT VALID;	Trying to key a Minus sign.	Ensure that you are entering input into the correct field.	---
DECIMAL NOT VALID;	Trying to key a Decimal (period).	Ensure that you are entering input into the correct field.	---
ALPHANUMERIC ONLY;	Trying to key characters other than Alphabetic and numeric.	Ensure that you are entering input into the correct field.	---
NUMERIC ONLY;	Trying to key characters other than numeric.	Ensure that you are entering input into the correct field.	---
ENTRY TOO SHORT;	Trying to exit the field before it is filled.	Ensure that you are entering input into the correct field.	---

Message	Reason	Solution	Reference Tech Note
INVALID KEY;	The key pressed is not valid.	Ensure that you are entering input into the correct field.	---
MUST CLEAR FIELD;	Trying to enter data in a field that must be cleared first.	Ensure that you are entering input into the correct field.	---
SCAN NOT ALLOWED;	Trying to scan into a key only field.	Ensure that you are entering input into the correct field.	---
KEY NOT ALLOWED;	Trying to key into a scan only field.	Ensure that you are entering input into the correct field.	---
ENTRY TOO SHORT;	Trying to exit the field before it is filled.	Ensure that you are entering input into the correct field.	---
RECOVERABLE ERROR;	Encountered an error from which you can continue.	Verify that your configuration settings for the hardware being used, usually a printer and cable issue.	---
UNRECOVERABLE ERROR;	Encountered an error from which you can NOT continue.	Verify that your Network settings are correct and you are in the correct mode using the correct Port.	T1113, T1114, T1161, T1171, T1187 and T1194
FUNCTION: \n\nFILE: \nLINE: \nCODE;	Encountered an error from which you can NOT continue.	Notify Connect over the WEB incident reporting system.	---
Press any key\nFor More Details...;	Press Enter for more information.	Advisory message.	---
Press any key;	Press a key to continue.	Advisory message.	---

Message	Reason	Solution	Reference Tech Note
Connection ERROR.\nREBOOT MOBILE UNIT;	Could not Connect.	Verify that your Network settings are correct and you are in the correct mode using the correct Port.	T1113, T1114, T1161, T1171, T1187 and T1194
Disconnect ERROR.\nREBOOT MOBILE UNIT;	Could not Disconnect.	Verify that your Network settings are correct and you are in the correct mode using the correct Port.	T1113, T1114, T1161, T1171, T1187 and T1194
RF Send ERROR.\nREBOOT MOBILE UNIT;	Could not Send.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
RF Receive ERROR.\nREBOOT MOBILE UNIT;	Could not Receive.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
RF Check ERROR.\nREBOOT MOBILE UNIT;	Could not run the RF Survey.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
RF Timeout ERROR.\nREBOOT MOBILE UNIT;	Have been trying to contact the host for the radio timeout period (2 minutes default).	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
REBOOT MOBILE UNIT;	Reboot the Mobile Unit do to loss of connection.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
Retry (Y/N)?;	Try again.	Try to send or receive again, or perhaps ensure that the printer is cabled to the Mobile Unit and is on.	---

Message	Reason	Solution	Reference Tech Note
TIMEOUT\n\nSending Data;	Mobile Unit out of the coverage area.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
TIMEOUT\n\nReceiving Data;	Mobile Unit out of the coverage area.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
Host Received Data\nAwaiting App Reply!;	Mobile Unit has sent and received an acknowledgement from the IP stack and is waiting for the application to return data.	Most likely host or network issue. Troubleshoot the customer's environment. Probable causes are Database record locking, application program failure, Host failure or network failure.	T1113, T1114, T1161, T1171, T1187 and T1194
* WAITING TO SEND *;	Mobile Unit out of the coverage area.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
TCP Error Reading\nMAC Address.\nREBOOT MOBILE UNIT;	Could not obtain the Mac Address from the Mobile Unit.	Possible hardware, driver or stack problem Contact the Mobile Unit manufacturer.	---
Invalid TIP Command;	Bad internal protocol.	Notify Connect over the WEB incident reporting system.	---
Session Ended\nBy User or Host;	User, Host, application or network has ended the session.	If the user did not end the session, most likely host or network issues. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
Server Packet Error;	Bad Protocol detected.	Usually a result of bad cabling, power or faulty transceiver. Also, will receive this if the Mobile Unit is in the wrong mode for server operation.	---

Message	Reason	Solution	Reference Tech Note
Error receiving host\nlist from Server;	Bad Protocol detected.	Usually a result of bad cabling, power or faulty transceiver. Also, will receive this if the Mobile Unit is in the wrong mode for server operation.	---
Unexpected Server\ndata received;	Bad Protocol detected.	Usually a result of bad cabling, power or faulty transceiver. Also, will receive this if the Mobile Unit is in the wrong mode for server operation.	---
Error starting\nhost application;	Connected to the server but can not connect to the distant end.	Configure the server handler to access the host application.	---
Select Host or App;	Need to choose your Host/application destination.	User selection required.	---
Connecting...;	Attempting to connect to the Host/application.	Advisory message.	---
TCP Error\nReading IP Address\nREBOOT MOBILE UNIT;	Mobile Unit missing Network IP information.	Configure the Mobile Unit with the correct network IP information.	---
Printer start error;	Could not initialize the printer.	Cable or power issue with the printer.	---
Battery too low\nto print;	Not enough power to print.	Replace the battery with a fully recharged battery.	---
Paper Feed Error\nFix Then Hit Enter;	Paper in the printer is not ready.	Replace the paper or rethread the paper in the printer.	---
Printer Error\nPrint Ended;	Can not print.	Check cable, battery, communication settings and paper in the printer.	---

<b>Message</b>	<b>Reason</b>	<b>Solution</b>	<b>Reference Tech Note</b>
User Count Exceeded.\n Session Ended;	Possible authorization issue.	Verify that you have the correct number of licenses for the number of Mobile Units you are using.	---
Primary Unavailable\nTrying Alternate;	First Host IP address not available trying the remaining addresses in the Host list.	Verify the host address.	---
APMAC.DAT Error\nSession Ended;	Access point Media Access Control error.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
MUIP.DAT Error\nSession Ended;	Mobile Unit IP Error.	Most likely a Mobile Unit network setting issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
Missing Subnet IP\nSession Ended;	Mobile Unit IP Netmask Error.	Most likely a Mobile Unit network setting issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
Error Opening File;	File is missing.	Verify that the configuration files are on the Mobile Unit. Or perhaps there is a hardware failure.	---
Telnet API\nnot found;	Program files are missing.	Reload program files.	---
Battery Low Warning\n\nReplace Battery Soon;	Not enough power to operate the Mobile Unit.	Replace the battery with a fully recharged battery.	---
No Host List.\nPress any key\nTo Edit Host IP's;	Have not configured your target hosts.	Configure the target host IP addresses.	---
Unable to Allocate\nFont Memory;	Mobile Unit does not have enough memory to load the fonts.	Reduce the fonts in use or expand the memory in the Mobile Unit.	---

Message	Reason	Solution	Reference Tech Note
Font Loading Error;	Could not load the font.	Ensure that the font is available to load.	---
Printer Not Ready\nPress R to Can not print. Retry\nC to Cancel Print;		Check cable, battery, communication settings and paper in the printer.	---
Mobile Unit in\nDemonstration Running in demo mode. Mode\nfor TwinClient;		Purchase a license from Connect.	---
Connected to Host;	Successful connection to the target Host.	Advisory message.	---
Telnet Mode not\nsupported on\nthis Mobile Unit;	This Mobile Unit must be used with a Connect Server.	Order a Connect Server.	---
Telnet Setup files\nnot found. Reload\nfiles then switch;	Customer specific configuration files are missing.	Load the configuration files into the Mobile Unit from Twin Client Manager.	---
Switched Client to\nTelnet Direct Mode;	Mobile Unit running in Telnet mode direct to the target Host.	Advisory message.	---
Switched Client to\nServer Based Mode;	Mobile Unit running through a Connect server in Server mode usually at port 1800.	Advisory message.	---
Port 23 is only\nallowed in Telnet Mode;	Can not set the port to 23 in Server mode. Port 23 is the standard Telnet port.	Advisory message.	---
Not Enough Memory\nTo Run;	Mobile Unit does not have the capacity to run the program do to memory restrictions.	Expand the Mobile Unit memory.	---
Press any key;	Press a key to continue.	Advisory message.	---

Printer may not be\nplugged in or\nreturned on!;	Can not print.	Check cable, battery, communication settings and paper in the printer.	---
OUT OF RANGE OF BASE;	Mobile Unit out of the coverage area.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
CONNECT SERIAL CABLE;	Serial cable not connected to the Mobile Unit.	Check cable, battery and communication settings for the Mobile Unit.	---
REMOVE SERIAL CABLE;	Remove serial cable from to the Mobile Unit.	Check cable, battery and communication settings for the Mobile Unit.	---
PLACE IN CRADLE;	Place the Mobile Unit in the cradle.	Advisory message.	---

Message	Reason	Solution	Reference Tech Note
REMOVE FROM CRADLE;	Remove Mobile Unit from the cradle.	Advisory message.	---
ACQUIRING CRADLE BUS;	Attempting to access the cradle through the serial port you have configured.	Advisory message.	---
Printer Out\nOf Range;	Printer out of the coverage area.	Most likely a range, access point or radio issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
Connection Refused\nBy Host;	You connected to the target host but the host disconnected you.	Verify that the configuration file has the correct Mobile Unit type and New environment variable set. Fallback to the Connect Default to verify the connection.	---
Connection Timed Out;	You connected to the host but did not logon in the appropriate time so the host disconnected you.	Modify the Host parameters for login.	---
Connection Failed\nHost Not Responding;	Could not connect to the Host.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
Connection Failed\nHost Unreachable;	Could not connect to the Host.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
Mobile Unit Out\nOf Range, Unable\nTo Transmit;	Mobile Unit out of the coverage area.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
Mobile Unit Out\nOf Range, Unable\nTo Receive;	Mobile Unit out of the coverage area.	Most likely a range, access point, radio, host or network issue. Troubleshoot the customer's environment.	---

Message	Reason	Solution	Reference Tech Note
Printer Not\nResponding;	Can not print.	Check cable, battery, communication settings and paper in the printer.	---
Printer Out\nOf Range;	Printer out of the coverage area.	Most likely a range, access point or radio issue. Troubleshoot the customer's environment.	T1113, T1114, T1161, T1171, T1187 and T1194
